## AquaDomi Venedig Flottant

Architect: Anton Lins Mag. Arch. Ing. / AquaDomi

**The floating streets "Floating Venice" are conceived as a floating urban area. We have here shown sectional views and variations of floating streets. Variation in the height and the placing of free areas, terraces and bridges result in a balanced interplay of the public and the private spaces – just like in Venice.**

Public streets with passage to private and public buildings and areas are formed. The variations in space and typology result in a richness and diversity of the experience of this new neighbourhood.

The floating streets consist of terrace houses, villas, hotels and apartments.

Public functions and bars, clubs, restaurants etc. can be placed at the intersections.
